**AUDIO VISUAL FURNITURE International**

Whether it's one table, or several, the **ModuDesk Series** can transform any space utilizing its modular system. The table can be split into two categories, Table Height or Counter Height. From there, each unit can connect to one another. Combining Linear tables is straightforward, but once a Joint Table is added to the mix, the dynamics change, allowing users to create closed or open type shapes. End Tables work by capping together two units that are back-to-back. And Rack Tables introduce server storage into the system that can be used to create anything from a simple console setup to a fully integrated conference table.
